

Create a page that looks like this, using CSS styles:

## Metaphor

A metaphor is a mapping from one domain to another. For example, moo is to cow as beep is to car. These mappings get so buried in our language that we don't even notice their effects.

For example, take the language used to describe a debate:

"He shot down her ideas."

"She defended her position."

"She overwhelmed his arguments."

"He had to retreat from that position."

These are all debate-as-war metaphors. It's a zero sum game. Someone wins and someone loses. The idea that both people could learn from each other just doesn't come up.

Design the page as below

### ***Meet Jack***

This is Jack. He's an odd little boy that just got an empty box for his birthday. He may *look* happy, but he's a *little* disappointed. Now he'll have to put a few things in the box.

Jack would really like...

- Roller blades
- Magic tricks
- Anything Pokemon
- A motorized Lego set
